

# HARD SCIENCE

## Soft Skills

### Fostering Civility in the Scientific Workplace

Classic "hard-disciplined" organizations, such as *science, medicine, technology and engineering*, present culture-specific challenges and needs. Traditional professional behavior models find themselves at odds with the complex interpersonal dynamics required in today's workplaces. **HARD SCIENCE/SOFT SKILLS** is an innovative lecture series focused on addressing this issue. The six-part series facilitates the transformation of traditional paradigms in science, medicine, technology and engineering. It will enhance and invigorate the potential of these organizations, and improve the quality of existence for "hard science" professionals and their varied workplace partners. Our speakers include renowned members of these communities whose life work, research, and publications have been devoted to this pursuit. The talks will identify issues, suggest solutions, and feature successes. This series is open to individuals of all disciplines.

#### LECTURE SCHEDULE

- Feb 7:** Dr. P.M. Forni
- Feb 28:** Dr. Arthur Ciaramicoli
- March 28:** Dr. Mark Donohue
- April 27:** Dr. Edward Hallowell
- May 30:** To Be Announced
